

**it's
green...**

...it's
smart and it
makes you
independent

Nedap brings a revolution in power: The PowerRouter

The PowerRouter is the ideal solution for self-use. It directs and converts energy from any power source to where and when it's needed. Store it, use it, or feed it into the grid. Make energy, save money, or even earn money.

Just connect solar energy and batteries to the PowerRouter and monitor and control where and when you use it. The PowerRouter allows you to optimize, control and manage your self-generated energy. The PowerRouter is perfectly equipped to make the most efficient use of the self-use regulations. Use your own energy whenever you need it most.

You're in charge.

There are seven reasons to visit our stand at Intersolar to talk about the possibilities of the PowerRouter and make the most of your self-use options: **It's green...**

...and it's all in one

The PowerRouter is more than just an inverter, it's a fully integrated power management system for different sources of renewable energy. This means that hardware and software were created with today's requirements – and future developments– in mind.

...and it's easy as 1-2-3

Most on-grid and off-grid systems involve complex installation procedures. No other system is this easy to install. The Power-Router is quite literally 'plug and play'.

...and it's on-line

Connect the PowerRouter to the internet, log on to the myPowerRouter.com web portal, and remotely monitor and control the PowerRouter from anywhere, anytime.

...and it's solid as a rock

With a PowerRouter installed, a reliable energy supply is guaranteed. It gives you control over how you use your self-generated energy. Once the batteries are connected, you have an integrated backup system to optimize self-use and to handle grid failures. You will never be dependent on energy providers again.

...and it
saves you
money

The PowerRouter can help you save money on ever increasing energy prices. Solar power is free. Use it directly or store it in batteries so the PowerRouter can make the most of your self-generated solar power. You're in charge of your own energy. **Forever.**

...and it's
globally
local, or
locally
global

The PowerRouter has been designed so you can easily adapt to any changes in feed-in tariffs, local regulations and requirements. The system can be adapted in any way that suits your situation, thanks to its 'connect and grow' capability. You decide, **you're in charge.**

...and it's the future

There's no doubt that the future for fossil fuels or renewable energy will evolve. And you can be part of this movement today, by using the PowerRouter to manage your own renewable energy sources and usage. Be prepared for the future just the way you like it.

Discover the revolution of power

We would like to welcome you to the Nedap stand **Nr. B5.370 – Halle B5** at Intersolar, where we can show you all the self-use potential of the PowerRouter, and how it can be adapted to your situation. Or you can get in touch with us through www.PowerRouter.com/eigenverbrauch
